

QLINE SAFETY BRIEF

# SAFE & SOUND ALL AROUND

From passenger safety to how to drive, ride, and park around the streetcar tracks, we ask you to join us in creating a safe QLINE ride for everyone!

## SHARE THE ROAD, DON'T DOUBLE PARK

Do not park on the streetcar tracks. This applies to all vehicles, including delivery vehicles.

## BICYCLE SAFETY

As a cyclist, it is important to stay alert when riding around the streetcar tracks. This also applies to wheelchairs, scooters, skateboards and strollers. Always stop, look and listen before crossing the tracks. Whenever possible, find alternate routes and bike friendly streets to ride on.

## DON'T GET STUCK! CROSS YOUR BIKE AT A 90 DEGREE ANGLE

To safely cross the streetcar tracks, cyclists should cross at a 90-degree angle. This also applies to wheelchairs, scooters, skateboards and strollers.

## PEDESTRIAN SAFETY

Obey traffic signals. Use crosswalks. Do not jaywalk. Look and listen before crossing the street and the tracks. Unplug from distractions like music or calls, and don't text while crossing the tracks.

## LOOK BEFORE YOU CROSS

Streetcars are quiet vehicles. Pedestrians are encouraged to LOOK and LISTEN for the streetcar and crossing using designated crosswalks.

## USE CROSSWALKS WHEN CROSSING THE STREET

The streetcar travels up to 35 mph, meaning it takes more time than a vehicle to come to a complete stop. Never walk in front of a moving streetcar, and only cross the streetcar tracks at the crosswalk when the 'WALK' signal is on.

## DON'T GET STUCK! WALK OVER THE STREETCAR TRACKS

To safely cross the streetcar tracks, pedestrians should step over the tracks to avoid getting stuck.

## STAY COOL...HOT WIRES OVERHEAD

Don't climb the poles or touch the wires around the streetcar tracks. The overhead cables that power the vehicles are live and "hot."
